Dog Personality App

I want to meet every dog in the world.

Clash of Clans base sharing app

I find that there is a really great market opportunity to create a quality Clash of Clans base sharing app.

None of the current ones are any good.

Thomas Stubblefield

Sample!

Memory Lane

An app that allows users to create a digital timeline of their life, sharing milestones, achievements, and cherished memories with friends and family. Users can upload photos, videos, and stories to create a personalized visual autobiography.

Virtual Hobby Hub

A platform that brings together people with similar hobbies and interests. Users can join groups, share tips, participate in challenges, and collaborate on hobby-related projects.

TourMates

A social networking app for travelers. Users can connect with like-minded individuals or locals at their travel destination to find travel companions, get recommendations, and share experiences.

SkillSwap

A platform where users can exchange skills and knowledge with others in their local community. For example, someone proficient in photography might offer lessons in exchange for cooking classes from a talented chef.

brainstorming

Let's think of a social media idea. This isn't limited to something like Instagram or Twitter; recipe apps are also included!

share your idea here!

demo.jaden.mov

Dog Personality App

I want to meet every dog in the world.

let's divide into teams! (optional)

Let's create something together. Here are some ideas for teams.

Design Team

Front-end Team

Firebase Team

getting started

We're going to start with a base website. Remember to make changes on the way to make your dream idea.

written document
TK

live demo! follow along!

first customization

Remember to use your **OWN** code snippet!

```
import { initializeApp } from "https://www.gstatic.com/firebasejs/10.0.0/firebase-  
apps.js";  
const firebaseConfig = {  
  apiKey: "HRefrdewSGERNadfsGWRdvEGgDgGWG-rgeEG",  
  authDomain: "YOURJAM.firebaseio.com",  
  projectId: "YOURJAM",  
  storageBucket: "YOURJAM.appspot.com",  
  messagingSenderId: "3267687965",  
  appId: "1:124345698765:web:43567i87o6utjyfghbdf45388",  
};  
const app = initializeApp(firebaseConfig);
```

second customization

Remember to add your **OWN** fields

for example.

Dog Personality App

name: George

breed: Golden Retriever

personality: Friendly
and loves tummy rubs

third customization

Remember to name your collection descriptively

for example. **Dog Personality App
dogs.**

fourth customization

Remember to write your code to work for your fields and collection name.

```
const form = document.getElementById("form");
const name = document.getElementById("name");
const breed = document.getElementById("breed");
const personality =
document.getElementById("personality");
addDocument({
  name: name.value,
  breed: breed.value,
  personality: personality.value,
  author: currentUser.displayName,
});
```

problem solving

Try to figure out a way to load posts on your own!

what's next

You aren't limited to creating posts and loading posts.

Try adding something new!

- Change the styling
- Change how posts are loaded
- Change fields
- Add cosmetic elements
- Load images
- Turn this into a PWA
